The Golden number is.

The Epact is

The Cycle of the Sonne.

The Dominicall letter.

Inductio Romana.

Septuagesima the 7. of February.

Quadragesima the 27. of February.

Easter day the 4. of April.

Rogation Sunday, the 9. of May.

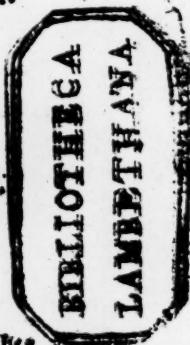

Ascension day, the 13. of May.

Whitsunday the 23. of May.

Corpus Christi the 3. of June.

Aduentus Domini the 8. of December.

Betweene Christmas and Shrouetide are six. weekes and  
 two dayes.

**Physicall obseruations.**

To let the Sanguine blood, when the Moone hath  
 her course in Pisces.

To let the Chollericke blood, when the Moone is  
 in Cancer or Pisces.

To let blood the Melanchellicke, the Moone being  
 in Libra, Aquarius, or Pisces.

To let blood the Phlegmaticke, the Moone being  
 in Sagittarius or Aquarius.

To prepare her moor when the Moone is in Gemini  
 Libra or Aquarius.

Good

Good

## Observations,

Good to  
purge. { With Electuaries, the Moone being in Cancer.  
With Pills, the Moone being in Pisces.  
With Potions, the Moone being in Scorpius.

Good to take venims, when the Moone is in Taurus Capricornus, or the latter part of Sagittarius.

Good to purge the head by nailing, when the Moone is in Cancer, Leo, or Virgo.

Good to take Glisters, the Moone being in Aries, Cancer, Libra, or Scorpius.

Good to stop Fluxes and Rewmes, when the Moone is in Taurus, Virgo, or Capricorne.

The best times to bathe, are when the Moone is in Cancer, Libra, Sagittarius, Aquarius or Pisces.

Cut haire of the head and beard, the Moone being well stationed in Libra, Sagittari, Aquari, or Pisces.

## Briefe observations of husbandrie.

Set, sow seeds, Graffe, & plant, the Moone being well seated, and in Taurus, Virgo, or Capricornus.

And all kinde of Corne in Cancer.

Graffe also when the Moone is increasing, and in Taurus, or Aquarius.

Sheere Sheepe the Moone encreasing.

Fell hard Timber from the full to the change.

Fell fyth, Copper, and Jewell, at the first quarter.

Libbe and geld Cattle, the Moone in Aries, Sagittarius, or Capricornus.

Kill far Swine for Bacon, the better to keepe their fatte in boyling about the full Moone.

Dade. 1602.

*A Prognostication*

in which you may behold  
the state of this present yeare  
of our Lord God;  
MDCII.

Being the second from the  
leap yeare.

Made and set forth by Iohn Dade  
Gentleman, practitioner in  
Physicke.

Imprinted at London for E. White  
the assigne of Iames Roberts.

Cum privilegio Regiz Maiestatis.

# A description of the foure quarters of the yeere: And first of Winter quarter.

☉ in ♍ ≈ ♎

**W**inter the first Astronomicall quarter of our  
yeere, began on Thursday the xii. day of De-  
cember last past Anno 1601. for at that instant  
the Sunne entered into the first part of Capricorne that  
Solsticiall signe, making then with vs the shortest day,  
and longest night in the yeere, by reason that he is then  
furthest remooued from our Zenith or Verticall point,  
and so this sayd Winter by Astronomicall computation,  
continueth vntill the xi. day of March (being Thursday)  
next following in this present yeere of our Lord God.  
1602.

The generall condition and affection of the ayre, by  
natures inclination is colde and moyste, causing greater  
abundance of colde crudities, and superfluous moysture  
in mans body, then any other quarter doth. And concer-  
ning this present Winter, I finde by many Artificiall cir-  
cumstances, that it will not greatly vary from the proper  
quality thereof, with many blustering, rough and stormy  
blastes.

Diseases commonly raging this Winter quarter, are  
the Goute, the Sciatica, paine in the head, necke and  
shoulders, some kinde of feauers, Measels, Quartaine  
Agues, Melancholy passions, Tooth-ach, Remmes, with  
diuers other griefes, too long to rehearse: The Lord  
graunt vs patience in these and in all other extremities  
what soeuer. Amen.

## A Prognostication.

### Of the Spring.

☉ in ♋ II .

**T**he Spring being the second part Astronomical of this yeare 1602, becommeth the xi. day of March, being Thursday, for then the Sunne entereth into the first min. of the signe Aries, the point Equinoctiall, and maketh not onely our day and night of equall length, but also the like throughout the world, and so climeth higher and higher to our comfort, till it come to our verticall point, and maketh our Solstitium, that is the longest day and shortest night: This Spring quarter continueth vntill the xii. of June, when the Sunne enters into the signe Cancer.

This season of the Spring is naturally hot and moyst, the most temperate and healthfull time of the yeare: yet bringeth it, or rather sheweth forth many sicknesses, not ingendring them by excelle, but discovering them which were inwardly bred, by the distemperance of other times.

As touching the state and temperature of this quarter, I gather that it will be very wet and stormy, (especially the month of May) with some thunder, and many shewes of hayle, yet other whyles comfortable, warme and dry weather, very profitable for the increase of the fruites of the earth.

The diseases which may happen in this quarter, are these or such like: namely, Scabbednes, small Poxe, Squinlies, Fluxes of bloud, Rewmes, Poles, falling euill, daungerous Coughes, long sicknesses, Consumptions, with many other accidents and diseases vsually hapning in the Spring: God the giuer of life and health, turne from vs all euill, and cause vs to increase in vertue and godlynes, that we may be heires of the kingdome of heauen. Amen.

Dade.

1602

## Of the Summer quarter.

○ In S N m.

**T**he third part of the yeare called the Summer quarter, alwaies taketh the beginning at the Sunnes departure from the last degree of Gemini, into the beginning of Cancer: which is this yeare of our Lord God 1602. Satterday, the xii. of June, for then the Sunne doeth come into the part of the Zodiacke, hauing the greatest declination towards the North, the day being now longest, and the night shortest in all the yeare, and so Summer continueth vntill the xiii. day of September following.

This season by nature being hot & dry, will (as I suppose) sometime vary from his kinde, and be mixed with sweet and pleasant shewers.

As for infirmities and bodily griefes (such as are likeliest to invade and afflict mans body this season) be continual and burning Agues, Plurisies, Frenisies, Impostumes, diuers paines in the head and backe, some strange & new infirmities, and sundry inflammations, as of the Luer, and other parts, with diuers other accidents, wherewith many shall be vexed, and not a few (by my coniecture) utterly bereft of their liues this quarter.

Wherefore while it is time, pray vnto God to defend vs with his mercifull hand, and for Christ his sake turne his punishments from vs, or otherwise to giue patience to vndergoe them thankfully.

B 3

OF

## A Prognostication.

### Of Autumne or the fall of the Lease.

○ In ≈ m 7.

**A**utumne or Haruest, otherwile called the fall of the Lease, being the fourth & last quarter Astronomical of this yeare, both begin on Tewsday, the xiii. day of September; at which time the Sunne maketh his progresse into Libra, the second Equinoctiall signe, and causeth the day and night to be againe of equall length, euen as before when the Sun entred into Aries.

This season by nature is cold and dry, variable and inconsistent, sometime intemperately colde, otherwhiles very warme, heating & opening the body and pores, and without good circumspection, procuring much sickness.

As touching the inclination of the weather, and general state of the ayre in this season, I gather that it will be very variable, with great instability and store of moisture, displeasing vnto men and beastes, and will breed and bring many noysome sicknesses in sundry sorts of people.

So as it is to be feared that sundry sicknesses and vnknewne diseases may arise & bee heard of among the people this quarter, by reason of the corruption that is bred in their bodies, and will now shewe it selfe in force; and among the rest these are like to happen: bastard Plurisies, obstructions in the Liver, straightnes in the breast, stitches, in the sides, Inflammation in the Lungs, hardnes of the Splene, quartaine Agues, blacke Jaundies, windines about the Widdiffe, Crampes, Pyles, Goute, with other sicknesses very grievous: seeke counsaile at the first for feare of too late repentance. The Lord God of his mercy, graunt vs true patience in all our extremities.

A briefe

**A** briefe note howv the seauen planets are placed about the earth in the sky, or vnder the earth, for euery month after Sun is downe, by which you may perceiue, how they keep their motion night and day al the yeere: Moreouer the good dayes of Simpathe, touching mans complection and body, in causes of administration of phisicke or such like; And also the euill dayes, according to the maleuolent aspect of the Planets, in which it is daungerous to let blood, take vomits, purgations, sweates or such like attempts.

### January.

All the Planets are vnder the earth at Sunne setting.

**T**he first, second and third dayes, inclined to moisture. The iiii. sharpe windes and stormes.

Last quarter on Tuesday the v. day 22. min before v. of the clocke in the morning. The v. & vi. daies more milde then the former. The vii. cloudy and cold. The viii. ix. x. xi. xii. dayes, sharpe winterlike weather.

New Moone on Wednesday the xiii. day, 21. mi. before viii. of the clocke in the morning. The xiii. & xiiii. dayes, close and cloudy weather. The xv. seasonable for the time. The xvi. xvii. xviii. & xix. dayes, colde and sharp ayre with frost and snow. The xx. day more milde.

First quarter on Thursday the xxi. day, at one of the clocke & 20. min. in the morning. The xxi. day wauring  
and

## A Prognostication.

and cloudy. The xxi. day, faire. The xxii. xxiii. xxv. & xxvi. daies, boisterous weather with raine or snow.

Full Moone on Wednesday the xxvii. day, at iiii. of the clocke in the after noone. The xxviii. xxix. & xxx. daies, thicke cloudes sending downe snow. The xxx. day, more temperate. The xxxi. day, cloudy and like to raine.
